

Penne NV – Quality Engineer

Your role

- Manage and further develop the company's quality management system.
- Ensure compliance with customer requirements, internal procedures, and IATF standards.
- Prepare and follow up on PPAPs (PSW, CP, FMEA, PFD, etc.) and APQPs according to customer specifications.
- Handle customer complaints and follow up to ensure effective and timely solutions.
- Monitor non-conformities, identify root causes, and implement corrective actions.
- Plan, coordinate, and execute internal and external quality audits, including follow-up actions.
- Develop work instructions and guide employees in applying quality standards.
- Support quality control activities and product release for shipment.

Your Profile

- You hold a higher technical degree.
- You have several years of relevant experience, preferably in the metal industry.
- Experience with IATF is an advantage but not required — we provide training and support.
- You speak and write fluent Dutch and English.
- You have strong analytical and problem-solving skills, thriving in complex situations.

What We Offer

- A challenging position in an innovative, stable family company with international clients.
- Competitive salary and attractive benefits: meal vouchers (€7.50/day), hospitalisation and group insurance, commuting allowance, and reimbursement of public transport.
- Excellent work-life balance with fixed hours (8:00–16:30) and easy accessibility.
- 32 vacation days with collective holidays during public and summer periods.
- Flexibility to work four days a week (4/5) for better work-life balance.
- Learning and growth opportunities through internal and external training.
- A warm, collegial work environment where teamwork and collaboration come first.
